

Nintendo Switch 2: A Data-Driven Launch Analysis

As someone who has grown up playing Nintendo games, it has inspired me to build something beyond a traditional application.

It is a small case study where I have tried to create an interactive analytics dashboard that explores the first-year performance of the **Nintendo Switch 2** using publicly available investor relations data and industry reports. It analyzes hardware sales, software performance, regional revenue distribution, market share, and key business KPIs through interactive visualizations built with **Python, Streamlit, Plotly, and Pandas**.

The objective was not simply to recreate charts, but to demonstrate the kind of analytical thinking the role requires: transforming raw business data into meaningful insights, presenting information in a stakeholder-friendly way, and highlighting the business story behind the numbers.

Dashboard Overview

The dashboard is organized into four interactive sections, each designed to answer a different business question using data visualization and performance metrics.

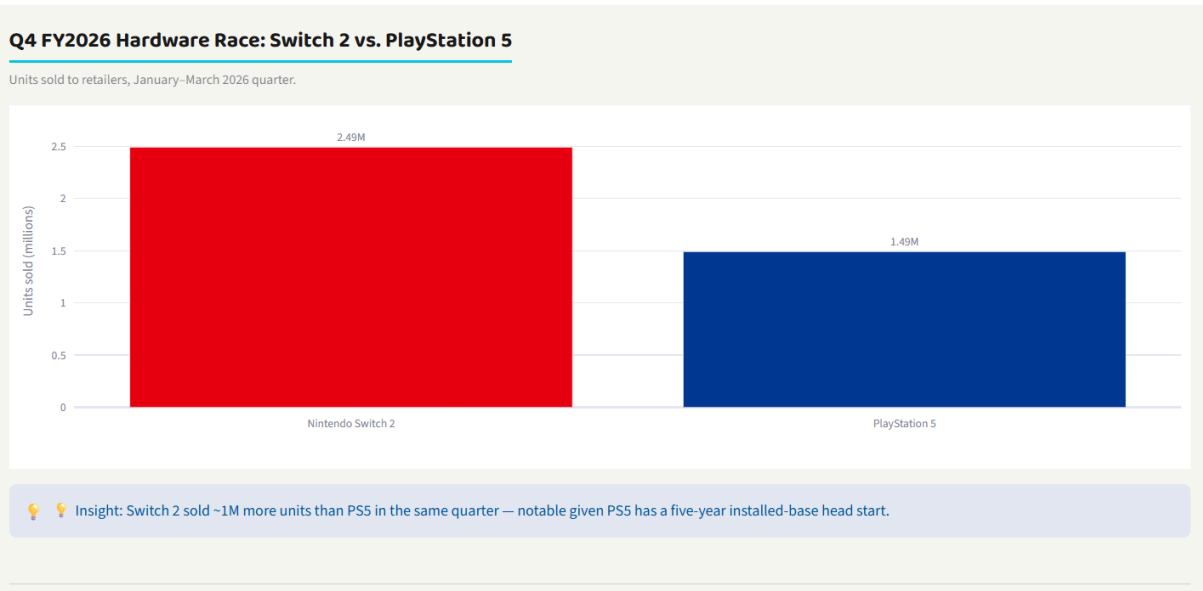

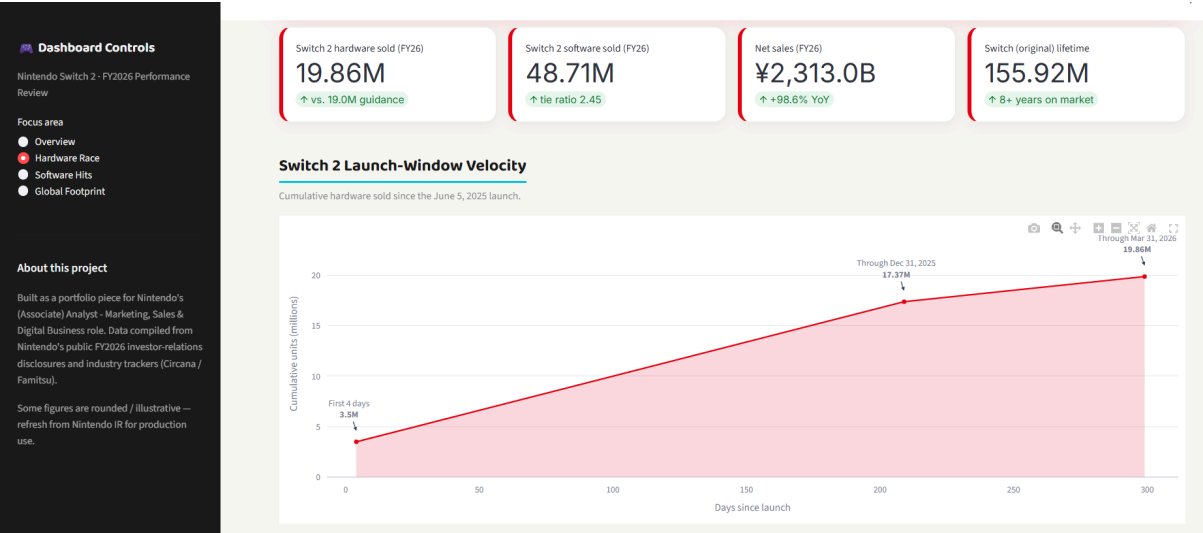

Overview

Provides a high-level snapshot of Nintendo Switch 2's first-year performance through key business KPIs, a comparison of lifetime Nintendo console sales, regional revenue distribution, and the digital versus physical software sales mix.

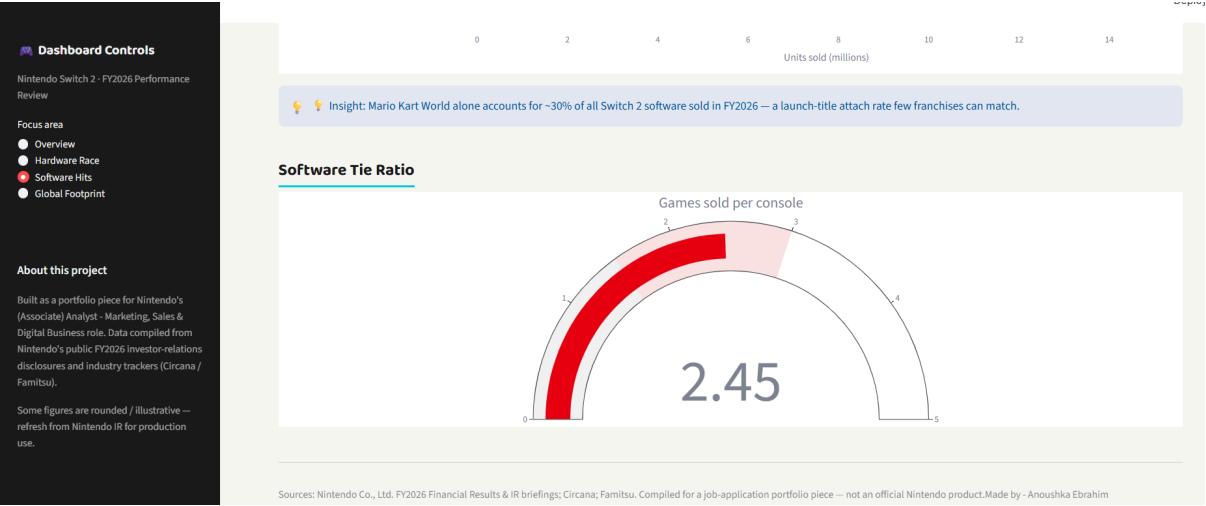

Hardware Performance

Tracks Switch 2's launch momentum by visualizing cumulative hardware sales over time and comparing its launch performance with competing consoles. This section highlights adoption trends and market positioning during the launch window.

🍄 Software Performance

Explores the commercial success of Nintendo's first-party titles through software sales rankings and attach rate analysis, illustrating how software contributes to platform growth and customer engagement.

Global Market Insights

Analyzes Nintendo's global presence by visualizing regional revenue contributions and overall console market share, providing insights into international performance and the importance of different geographic markets.
